

Research Study for Advanced Hereditary Breast Cancer

Do you or someone you know have metastatic or locally advanced breast cancer that is BRCA-associated?

The Brocade3 study is a research study evaluating the safety and effectiveness of an investigational, oral medication in addition to treatment with chemotherapy for patients with metastatic or locally advanced BRCA-associated breast cancer.

Study volunteers must meet the following criteria:

- Be ages 18 or older
- Have metastatic breast cancer or locally advanced breast cancer for which local therapy (surgery or radiation) is not appropriate
- Have a BRCA1 or BRCA2 mutation
- Not be pregnant or breastfeeding
- Must be HER2-negative
- Other criteria apply

Compensation for travel may be available.

For more information, ask your doctor about the BROCADE3 Study or visit www.Brocade3Study.com to see if you may qualify
